

# Asset Management System with Hive Intelligence

---

**On October 27, the two tech companies Nornir AS and qbee AS entered into a strategic collaboration to offer a new generation Asset Management System based on machine learning and Hive intelligence.**

**The collaboration is segregated into two main parts. First part is for internal use where Nornir will deploy the qbee.io asset management system to administer internal network resources that build up the Hive infrastructure.**

*"qbee.io was developed to manage any type of Linux server or IoT device. Being able to support Nornir in their mission to create the Real Time Web (B2C) concept and managing their private Hive networks (B2B) is a unique way to showcase the flexibility our device management technology offers."*

*- Carsten Lehbrink, CEO of qbee AS*

**Second part is to embed the system into the Hive Collective so it can be offered to any network domain owners. This helps them to keep control of their online network resources.**

**The new Asset management system will be a one of a kind solution that can be applied to any kind of network resources, from small active and passive sensors to edge computers and IoT devices.**

*"Imagine you want to control assets from different technology platforms and bring them together without changes to existing infrastructure or do any code changes. The Hive will connect the past, present and future and keep your digital assets under control in pure realtime".*

*- Pål Kristian Levang, CEO of Nornir AS*

## About qbee AS

qbee is a Norwegian software company delivering a SaaS device management solution for Linux and embedded Linux. This solution is used for various IoT projects such as asset management, remote access through the built-in VPN or over-the-air software updates. A CVE vulnerability analysis ensures that systems managed with qbee are secure. In addition, a full monitoring solution gives detailed insights into the health of the system both in terms of metrics and other relevant properties.

## About Nornir AS

Nornir is a technology provider that offers state-of-the-art software tools for development of sustainable sensors and mobility networks within Smart City industries and Internet of Everything. Nornir's main contribution is to help innovators and developers to adapt quickly to the fast growing AI market and how to utilize and build intelligent networks that in the long term could result in growing revenue / tax income for the enterprises and municipalities.
